

Our environmental commitment

Landscape East & West is a Certified Eco-Logical Business.*
We are committed to sustainability and utilize eco-friendly practices
for the safety of our customers' families and pets.
How do we practice our commitment?

On the job:

- We use four-cycle lawn mower engines and EPA Phase 2 Compliant Blowers to reduce emissions.
- We offer the option of reel mowing and hand sweeping as an alternative to gas mowers and blowers.
- We use only organic lawn, tree and shrub fertilizers.
- We promote the use of weather-based irrigation controllers to reduce the waste of water.
- We recycle all PVC, metal, wood, concrete and yard debris from the jobsite.
- All of our additional landscape products, including organic compost, are OMRI** listed and designed to enhance both turf quality and soil microbes.
- We encourage the recycling of grass clippings on lawns during late spring through fall, which naturally reduces the need for fertilizers.
- We promote the use of low voltage and LED lighting to conserve energy.

On the road:

- Our vehicle fleet includes hybrid and low-emission vehicles.
- We design our maintenance routes as efficiently as possible to reduce fuel consumption and emissions.

At the office:

- We use recycled paper in our office and recycle all of our waste.
- Instead of discarding old engine oil, we use it to heat our mechanic's shop with our clean burn oil furnace.
- We filter, clean, and reuse the wash water from our equipment and truck wash pads.

Your family and the environment are important to us!
